Use of Spray Adjuvants

Staunch is a preemergence herbicide for which spray adjuvants have little or no influence on performance. However, several herbicides used in tank mixtures with Staunch require use of adjuvants to aid in the control of emerged weeds. Use only those adjuvants recommended on the label of the tank mix product and approved for use in growing crops. Surfactants and/or low rate liquid fertilizers (28%, 30% or 32% UAN), 17 lbs/100 gal of ammonium sulfate (AMS) or 1 qt/100 gal of Trophy Gold adjuvants may be used with tank mixes applied preplant or preemergence to the crop.
