

The 'yield protecting corn herbicide'

Volley ATZ Lite is a premix of atrazine and a residual corn herbicide that delivers consistent protection from grass and small-seeded broadleaf weeds across multiple weather conditions.

- Residual soil activity
- Full season yield protection
- Tillage and application flexibility
- Performance in all tillage systems
- Grass & small-seeded broadleaf weed control with the power of atrazine
- Including yield robbing weeds like: foxtails, waterhemp, barnyardgrass, fall panicum, crabgrass & Black nightshade
- Excellent crop safety
- Maximizes yield potential
- Easy handling formulation
- More uniformity in storage and pumping

APPLICATION TIMING

EPP – Early PrePlant – Up to 30 days prior to planting

PPI – PrePlant Incorporated – < 2” deep, within 14 days of planting

PRE* – Preemergence Surface – prior to or after planting

EPOST – Early Postemergence – up to 11” corn height

USE RATES

< 3% OM	SOIL TEXTURE	> 3% OM
1.6 – 1.8 qts./A	Coarse	1.8 – 2.0 qts./A
1.8 – 2.1 qts./A	Medium	1.9 – 2.1 qts./A
1.9 – 2.2 qts./A	Fine	1.9 – 3.0 qts./A

*Incorporate with rotary hoe if sufficient rainfall does not occur in 7 days after application.

2.0 qts/A of Volley ATZ Lite = 2.0 # a.i. acetochlor + 0.75 # a.i. atrazine
