

The 'yield protecting corn herbicide'.

Volley ATZ is a premix of atrazine and a residual corn herbicide that delivers consistent protection from grass and small-seeded broadleaf weeds across multiple weather conditions.

FEATURES AND BENEFITS

- Residual soil activity
- Full season yield protection
- Tillage and application flexibility
- Performance in all tillage systems
- Grass & small-seeded broadleaf weed control with the power of atrazine
- Including yield robbing weeds like: foxtails, waterhemp, barnyardgrass, fall panicum, crabgrass & black nightshade
- Excellent crop safety
- Maximizes yield potential
- Easy handling formulation
- More uniformity in storage and pumping

APPLICATION TIMING

EPP – Early PrePlant – Up to 30 days prior to planting

PPI – PrePlant Incorporated – < 2” deep, within 14 days of planting

PRE* – Preemerge Surface – prior to or after planting

EPOST – Early Postemergence – up to 11” corn height

USE RATES

SOIL TEXTURE	< 3% OM	> 3% OM
Coarse	2.2 - 2.4 qts./A	2.4 - 2.6 qts./A
Medium	2.4 - 2.8 qts./A	2.6 - 2.8 qts./A
Fine	2.6 - 3.0 qts./A	2.6 - 3.4 qts./A

* Incorporate with rotary hoe if sufficient rainfall does not occur in 7 days after application.

2.65 qts/A of Volley ATZ = 2.0 # a.i. acetochlor + 1.5 # a.i. atrazine

ALWAYS FOLLOW USE DIRECTIONS ON THE LABEL
