

ACCURATE® Herbicide—Effective postemergent control of hard to handle weeds

ACCURATE® Herbicide provides proven control of problem weeds in wheat and barley, and is a great product to use for fallow, pasture and rangeland. ACCURATE, with the active ingredient metsulfuron, also has a low use rate and residual control for later germinating weeds.

ACCURATE is a cost-effective alternative to Ally® herbicide. In addition, there are no grazing restrictions when you use it. ACCURATE is absorbed through the foliage of labeled weeds, rapidly inhibiting their growth. Leaves of susceptible plants appear yellow or white from one to three weeks after application.

For control of additional weeds in pastures or rangeland, ACCURATE can be tank-mixed with other registered herbicides. Check label for specific products and use rates.

For Use On: Wheat, barley, pastures, rangeland, fallow

Formulation: WDG (water dispersible granule)

Packaging: 8 oz. bottle, 8 per case

Active Ingredient: Metsulfuron

Mode of Action: ALS Inhibitor

Use Rates: 1/10 oz. – 1 oz. per acre depending on crop and weed

Signal Word: Caution

Weeds Controlled*

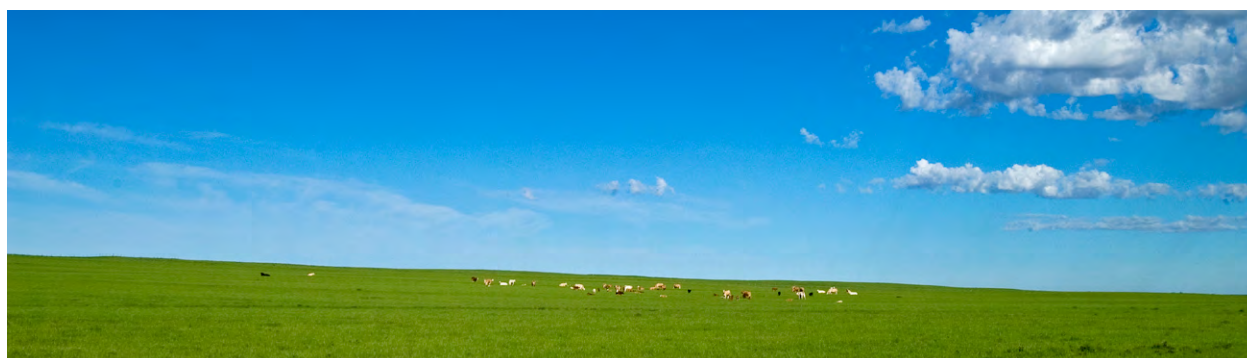

- Common chickweed
- Groundsel
- Pigweed
- Mustards
- Common broomweed
- Common mullein
- Marestalk

**See label for complete listing of controlled weeds.*

Application Information

For best results, apply **ACCURATE** to young, actively growing weeds. The use rate for target weed depends on the weed spectrum and size of weeds at application and labeled crops or use sites. The degree and duration of control may depend on the following factors:

- Weed spectrum and infestation intensity
- Weed size at application
- Environmental condition at and following treatment

Consult label for specific direction on application information for other crops, spray additives, re-entry interval (REI) and personal protective equipment (PPE).

For more information about ACCURATE Herbicide, contact your local crop protection dealer, visit www.cheminova-us.com or call 800-548-6113.
