

REPORT[®] EXTRA Herbicide—Broad spectrum selective postemergent control of both broadleaf and grassy weeds

REPORT[®] EXTRA Herbicide controls numerous broadleaf and grassy weeds in winter and spring wheat (including durum), barley, triticale, fallow and Conservation Reserve Program (CRP) lands.

Weeds controlled by **REPORT EXTRA** include groundsel, henbit and miner's lettuce, and grassy weeds such as annual bluegrass and annual ryegrass. With two active ingredients, chlorsulfuron and metsulfuron, **REPORT EXTRA** can also be used preplant or preemergence on wheat crops except durum and Wampum varieties of spring wheat.

Application Information

REPORT EXTRA is an affordable alternative to Finesse[®] herbicide. For best results, apply it to young, actively growing weeds. The use rate will depend on weed spectrum and size of weed at time of application. Please refer to label for specific directions related to target weed and use sites.

The degree and duration of control of weeds may depend on the following factors:

- Weed spectrum and infestation intensity
- Weed size at application
- Environmental condition at and following treatment

In addition, please read the **REPORT EXTRA** label for specific preplant and preemergence application directions as well as recommendations for postemergence applications on both new plantings and established stands.

For Use On: Wheat, barley, triticale, fallow and Conservation Reserve Program (CRP) lands

Formulation: WDG (water dispersible granule)

Packaging: 20 oz. bottle, 12 per case

Active Ingredient: Chlorsulfuron and metsulfuron

Mode of Action: ALS Inhibitor

Use Rates: 0.2 oz. – 0.5 oz. per acre depending on target weed and use site

Signal Word: Caution

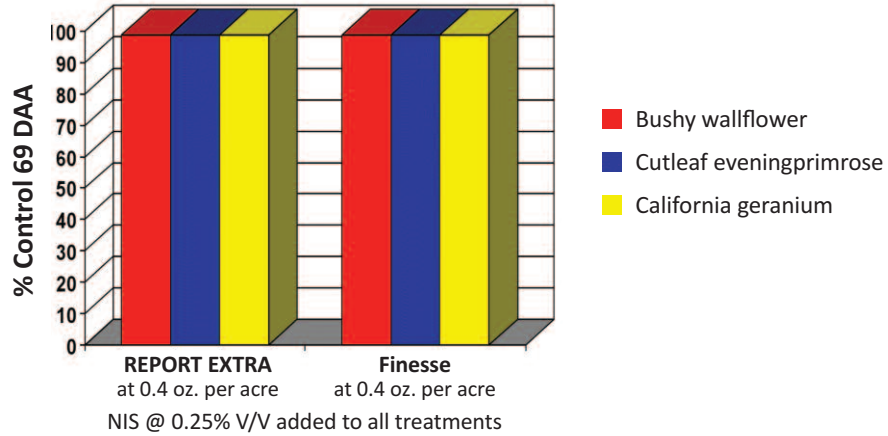

Weeds Controlled*

- Blue mustard
- Corn spurry
- Common groundsel
- Henbit
- Annual ryegrass
- Annual bluegrass

**See label for complete listing of weeds controlled.*
