

SOLIDA[®] Herbicide—Use it on row and specialty crops for control of a wide range of annual grasses, sedges and broadleaf weeds

SOLIDA[®] Herbicide controls numerous grasses, sedges and broadleaf weeds in a variety of crops including citrus fruit, stone fruit, tree nuts, pome fruit, grapes, potatoes, potatoes grown for seed, field-grown tomatoes, and field corn.*

The active ingredient in **SOLIDA** is rimsulfuron, which controls hard to manage weeds including fleabane, marestalk, barnyardgrass, woolly cupgrass and morningglory. It is rapidly absorbed through both the roots and foliage of plants stopping the growth of susceptible weeds.

SOLIDA is an inexpensive alternative to Matrix[®] and Resolve[®] herbicides, and offers long-lasting soil residual activity in labeled crops. It has excellent tree, nut and vine tolerance and won't cause injury or scarring for in-season applications. **SOLIDA** can be tank-mixed with other suitable herbicides for greater residual activity and broader weed control. It's also a great tank-mix partner for registered fungicides and insecticides. See label for recommendations.

Application Information

Depending on your crop, **SOLIDA** can be applied as a preplant, preemergence or postemergence product. See the product label for specific directions on rates, target weeds and crops.

**not for use on field corn in California*

For Use On: Citrus fruit, stone fruit, tree nuts, pome fruit, grapes, potatoes, potatoes grown for seed, field-grown tomatoes, and field corn (*not for use on field corn in California*)

Formulation: WDG (water dispersible granule)

Packaging: 20 oz. bottle, 8 per case

Active Ingredient: Rimsulfuron

Mode of Action: ALS Inhibitor

Use Rates: 0.5 oz. – 4 oz. per acre depending on crop

Signal Word: Caution

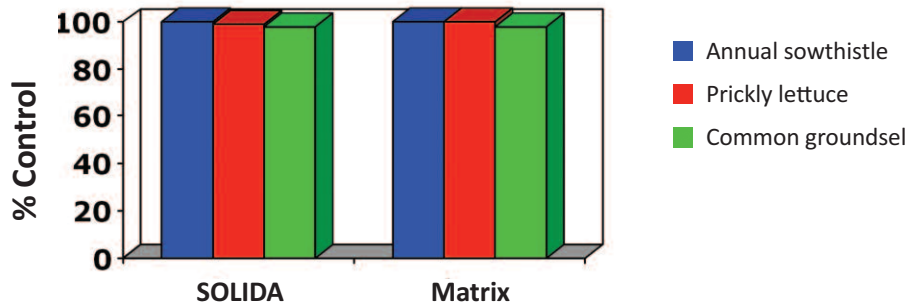

Weeds Controlled*

- Barnyardgrass
- Fleabane
- Marestalk
- Morningglory
- Henbit
- Woolly cupgrass

**See label for complete listing of weeds controlled.*

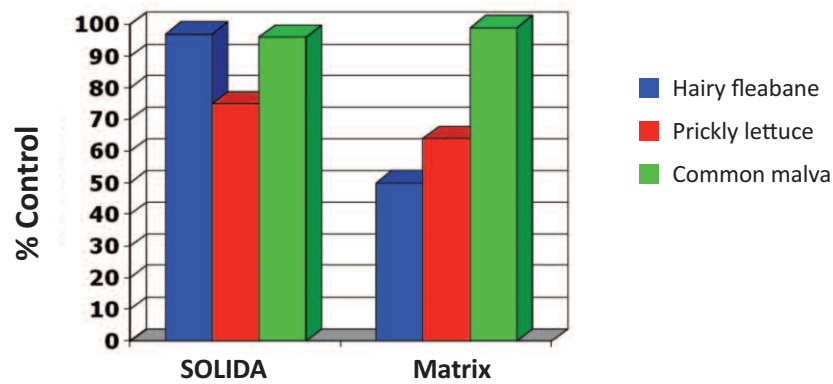

Postemergence Performance of SOLIDA Herbicide

Citrus 90 DAT, Fresno, CA 2009

Applications made early postemergence at 4 oz. per acre + NIS

Grapes 30 DAT, Fresno, CA 2009

Applications made early postemergence at 4 oz. per acre
