Fall or spring herbicide solutions for managing horseweed (marestail)

DuPont™ Canopy® EX and Canopy® herbicides

Managing Marestail in Soybeans

Horseweed (marestail) facts

- Germinates anytime
- Rapidly grows to greater than 5 feet
- Creates thousands of tiny seeds
- Spreads tiny seeds in the wind for several miles
- Has widespread resistance or tolerance to several herbicides, including glyphosate

University¹ approach for controlling horseweed (marestail)

- Effectively control emerged horseweed (marestail) before planting the crop.
- 2,4-D LVE should be included in the herbicide program whenever possible.
- Utilize multiple herbicides to provide additional modes of action and residual activity.
- Apply herbicides before the horseweed (marestail) plants are greater than 6 inches tall.

Incorporating DuPont™ Canopy® EX and Canopy® herbicides in burndown applications will help eliminate the need for more costly in-crop herbicide tank mixtures that may be less effective in controlling larger marestail.

Rate recommendation

Fall or Early Spring

Canopy® EX 1.75-2.0 oz/A
+ 2,4-D LVE 1 pt/A
+ COC 1% v/v

Spring Burndown

Canopy® 3-4 oz/A
+ 2,4-D LVE 1 pt/A
+ COC 1% v/v

Application information

For winter annual grasses, add Gramoxone (paraquat) Inteon or Abundit® Extra herbicide (glyphosate). Consult tank-mix partner labels for additional adjuvant recommendations.

See the labels for the complete list of broadleaf weeds controlled by these products.

For more information

Contact your local DuPont retailer or DuPont representative to learn more about Canopy® EX or Canopy® for soybeans. And visit us on the Web at canopy.dupont.com or canopyex.dupont.com.
