

CHEMINOVA DIMETHOATE 4E Insecticide—Broad spectrum activity on adult and nymph insect pests in numerous crops including citrus, cotton and corn

CHEMINOVA DIMETHOATE 4E Insecticide controls key insect pests in a variety of crops including citrus, soybeans, corn, cotton, pears, pecans and potatoes. An organophosphate insecticide, it has systemic and contact activity in a broad spectrum of piercing, sucking and chewing insects such as aphids, fleahoppers, leafhoppers, leaf miners, grasshoppers, mites, thrips, scale, and corn rootworm.

CHEMINOVA DIMETHOATE 4E does not flare spider mites and is an excellent tank-mix partner with most insecticides, miticides and fungicides. It works well as a first line of defense to knocking down most target pests first and allowing a grower's rotation partner insecticides to be saved for later spray windows. Using **CHEMINOVA DIMETHOATE 4E** this way strengthens integrated pest management programs for better management of both adult and nymph pest populations.

For Use On: Citrus, cherries, pears, pecans, asparagus, beans, broccoli, cauliflower, celery, lettuce, melons, peas, peppers, potatoes, tomatoes, corn, cotton, soybeans wheat and seed crops

(See label for complete list of crops.)

Formulation: EC (emulsified concentrate)

Packaging: 2.5 gal. container, 55 gal. drum, 265 gal. tote

Active Ingredient: Dimethoate

Mode of Action: AChE inhibitor

Use Rates: 8 fl oz. – 20 fl oz. per acre depending on crop

Signal Word: Warning

Insects Controlled*

- Aphids
- Beetles
- Grasshoppers
- Leaf miners
- Mites
- Thrips
- Whiteflies

**See label for complete listing of controlled mites and insects.*

Application Information

CHEMINOVA DIMETHOATE 4E can be applied via irrigation systems (chemigation), or by ground or air. Apply to crops when mites/insects first appear. Note the interval (days) between last application and harvest of treated crops. See the product label for specific directions on rates, timing and use restrictions by crop.
