

# PERFORMANCE...

without Leci-Tech

## << DRIFT REDUCTION

LECI-TECH® products not only reduce driftable fines, but does so without increasing the number of “too large” droplets.

## DROPLET RETENTION >>

LECI-TECH products ensure that more droplets hit the target and stay there to provide more consistent control.

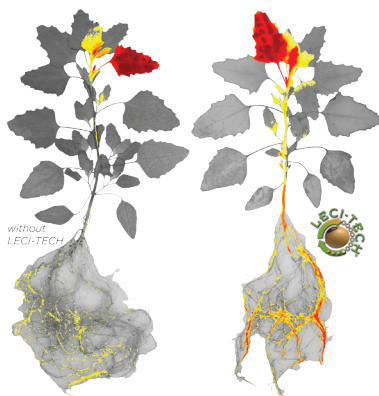

*White clay solution was used as a visual marker.*

without  
LECI-TECH

## << PENETRATION

LECI-TECH products provide quicker uptake with no impact on crop safety to maximize pesticide and nutritional product performance.

*The red color indicates amount of glyphosate solution taken into the plant.*

## ...MADE EASY!

# COMPADRE®

Compadre® with LECI-TECH: For growers or custom applicators who want to ensure their glyphosate sprays will perform to optimal levels, Compadre provides enhanced deposition, controls drift and prevents formation of foam in the spray tank. Unlike competitive products, Compadre is formulated from soybean constituents, supporting the American farmer.

- Drift reduction
- Droplet retention
- Penetration
- Defoaming

### Application Information:

1 pint per 100 gallons

**Mixing Order:** Compadre should be added to the tank LAST!

**Target Chemistries:** ALL glyphosate formulations
