

**Gaucho® XT**

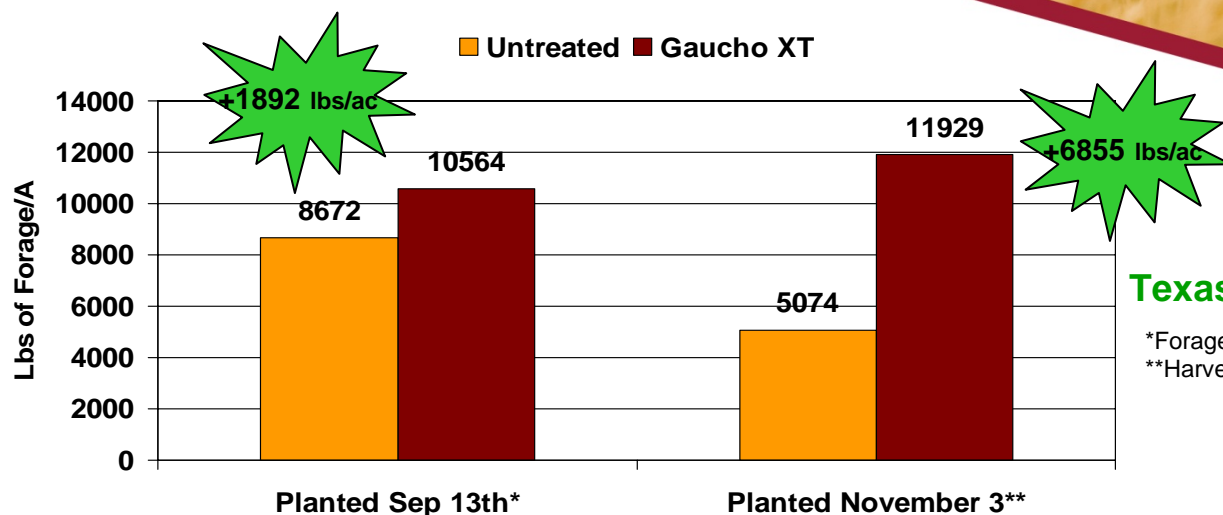

# Gaucho XT for healthier crops, better yields and improved profits.

Gaucho® XT seed protectant is a low-dose systemic, flowable insecticide/fungicide for wheat, barley and oats that protects against a broad spectrum of insects and diseases.

- Gives wheat, barley and oats a fighting chance against seed and soil-borne diseases, as well as yield-robbing insects.
- Controls smuts, root rots, *Septoria* disease complex and Pythium damping off, while suppressing early season powdery mildew and wheat leaf rust.
- Early season protection promotes healthy root development and the potential for higher yields and profit.
- Reduces fall infestation levels of the Hessian fly and protects both seed and young seedlings against wireworm damage.
- Provides effective control of aphids, the vector of barley yellow dwarf virus, for up to 70 days.
- Ask your seed conditioner for Gaucho XT. If professionally treated seed is not available, Gaucho XT can be applied independently with proper treating equipment.

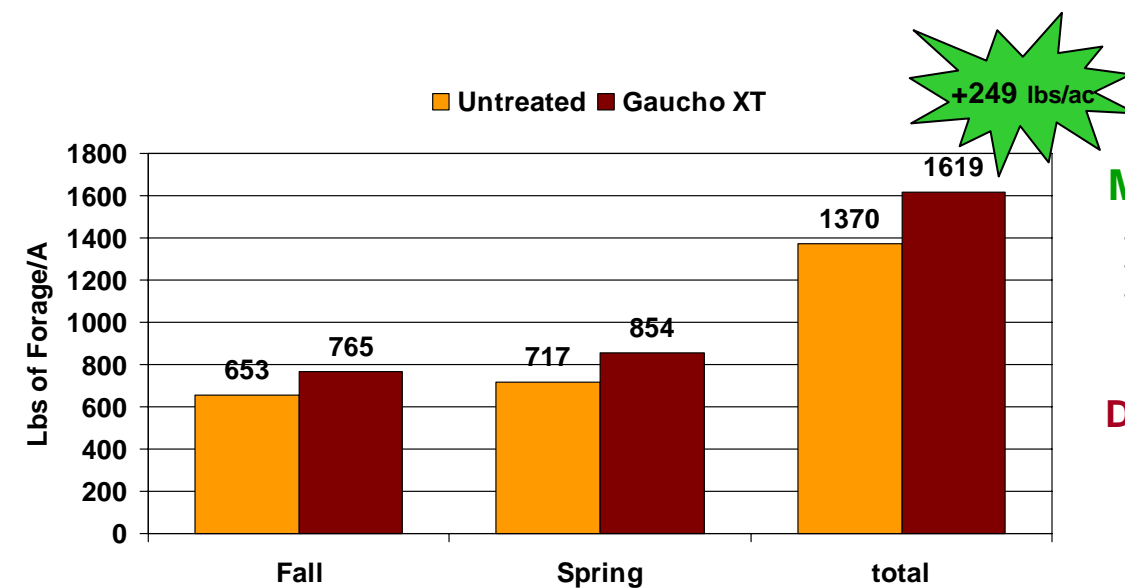

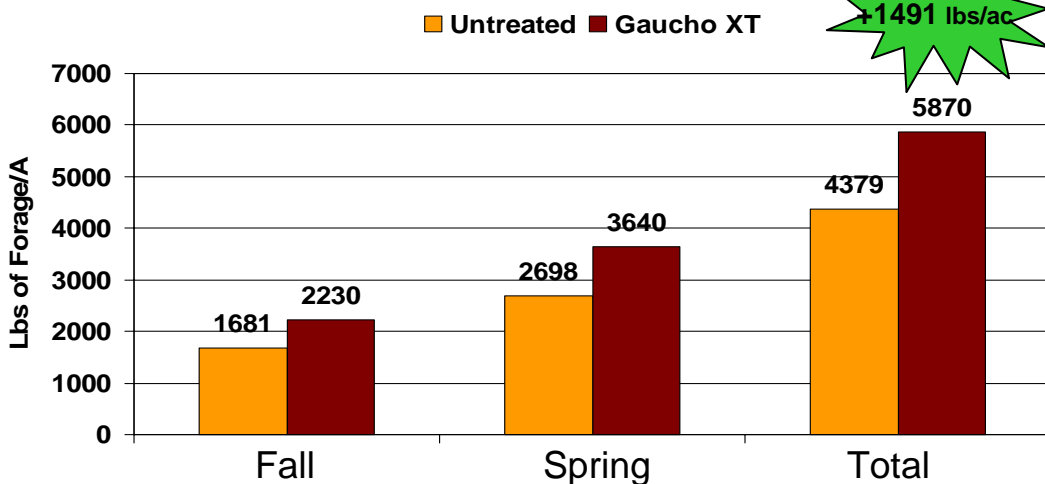

Gaucho XT works at low rates compared to traditional soil- or foliar-applied insecticides, which are typically applied at rates 10- to 20-times higher per acre. Consult the Gaucho XT product label for detailed use recommendations.

# Gaucha XT Forage Trials

## Springer, OK (2011)

- Forage Harvest Mar 14<sup>th</sup> and April 28<sup>th</sup>
- Planted September 7<sup>th</sup>
- 200 # N/ac (100# fall, 100# spring)

## Medford, OK (2011)

- Forage Harvest Mar 17<sup>th</sup> and April 29<sup>th</sup>
- Planted September
- 120 # N/ac (80# fall, 40# spring)
