

# PERFORMANCE...

without Leci-Tech

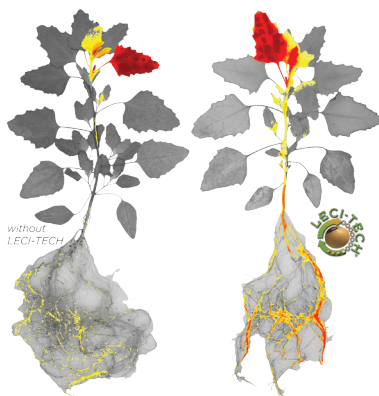

## << DRIFT REDUCTION

LECI-TECH® products not only reduce driftable fines, but does so without increasing the number of “too large” droplets.

## DROPLET RETENTION >>

LECI-TECH products ensure that more droplets hit the target and stay there to provide more consistent control.

*White clay solution was used as a visual marker.*

## << PENETRATION

LECI-TECH products provide quicker uptake with no impact on crop safety to maximize pesticide and nutritional product performance.

*The red color indicates amount of glyphosate solution taken into the plant.*

## ...MADE EASY!

# Liberate®

Liberate® with LECI-TECH is a 100% active, non-ionic surfactant derived from soybean-based materials that provides excellent crop safety, drift reduction, droplet retention and enhances penetration of pesticide sprays into the plant.

*Most versatile adjuvant in the market today...*

- Drift reduction
- Droplet retention
- Penetration
- Neutral pH allows use with many pesticides and nutritionals
- Odorless

**Application Information:** 1 to 2 quarts per 100 gallons

**Mixing Order:** Liberate should be added to the tank LAST!

**Target Chemistries:** sulfonyl urea (SU) herbicides, fungicides and those chemistries requiring a neutral pH
