

Start Clean to Finish Strong.

A clean season starts with Olympus® herbicide at burndown or pre-emergence in winter wheat.

- Add Olympus® herbicide at burndown for reliable and cost effective brome suppression in winter wheat.
- Use Olympus with glyphosate to manage tough grasses such as true cheat, downy and Japanese brome in burndown.
- Olympus is a proven brome herbicide with excellent crop tolerance and can now be applied preplant, pre-emergence or postemergence in winter wheat.
- Olympus has the residual power to keep fighting weeds as they germinate.
- The Olympus burndown application is designed to complement your post-applied herbicide program in the spring for full season brome control.

Preplant or Pre-Emergence

- Apply Olympus at 0.6 oz/A with a labeled rate of glyphosate.
- Follow the glyphosate product label for rate and adjuvant recommendations for the control of emerged weed species.

Postemergence

- In the spring, apply Olympus at 0.6 oz/A for follow-up postemergence weed control.

Bayer CropScience

OLYMPUS PRE-EMERGENT BENEFITS

- Early season control reduces weed competition to help maximize your yields.
- Widens window of application.
- Early season broadleaf weed control.
- Do not apply more than 1.2 oz/A of Olympus in one wheat growing season.
- Consult with your Bayer representative for treatment recommendations tailored for your area.
- A fall application of Olympus may be followed by a spring application of Olympus up to a maximum of 1.2 oz/A per crop year.
